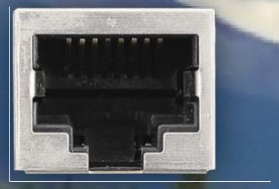
Unleash the potential.



WireIE

Connectivity everywhere

Imagine a world where you can offer a limitless network experience to all of your currently under-served and inaccessible enterprise client locations.

With WireIE, this reality is within reach.

- We partner with leading carriers to provide their enterprise clients with access to critical business solutions.
- Our innovative networks are scalable, secure, and with ultra-low latency.
- Our network performance is backed by a carrier grade Service Level Agreement (SLA).

Our service is managed end-to-end from site acquisition through installation, configuration, financing, and network management. When you partner with us, we stay engaged with you at every step and provide you with the monitoring and support that is vital for optimizing your operations.

Our expertise helps you extend your network and lock in exclusive access to your new and existing enterprise clients.

We are the connectivity experts

At WireIE, we are a team of specialists with proven experience in designing, building, and managing state-of-the-art Networks. Our expertise is in providing carrier grade Ethernet to under-served and inaccessible enterprises.

- Remote, rural, or previously under-served enterprise locations have access to the same productivity solutions as are available at the company's headquarters.
- Major carrier partners unleash the potential of their clients in the extraction, utilities, healthcare, government and financial industries.
- We listen to those clients, understand their challenges and provide them with an innovative solution on an accelerated timeline enabling the carrier to quicken their sales cycle.

WireIE Transparent Ethernet Solution™ (TES)

WireIE's TES is a productized high-availability network extension solution available exclusively to carriers. WireIE helps your team expand its addressable markets to client locations that are currently off-net, under-served, or accessed through competitor networks. With WireIE's TES, 100% of your clients' staff can enjoy the same network performance, scalability and security as their colleagues at head office, regardless of where they are located.

Using the latest in fibre and digital radio technology, combined with world class network engineering, TES gives carriers a scalable way to capture missed revenue from under-served markets. Your clients can be certain that their staff receives the full benefit of the company's ICT investments at all locations. WireIE's TES is backed by a carrier grade Service Level Agreement (SLA).

- Guaranteed Performance (up to 99.999% availability)
- Scalable Bandwidth (up to GigE)
- Physical and process security
  (certified and deployed for law enforcement, courts, airports)
- Physical and geographical redundancy

The Connected Enterprise

Whether your clients or prospects are fully or partially off-net or on a competitor network, it is not acceptable to have some locations running different solutions or using sub-standard processes because of variations in network capabilities. Enterprises need transparent access to the benefits of secure, high-speed, high-availability network communication. WireIE's TES allows every worker in every location to benefit from the same real-time productivity solutions provided by their enterprise.

Expand Addressable Markets

- Sell to 100% of your prospects whether they're fully or partially off-net or underserved
- Upsell existing clients
- Offer increased capacity, speed, and availability as a service upgrade or as protection
- Reduce client loss
- Reduce the risk of client loss by getting more client locations off competitor circuits and onto your network
- WireIE's TES ensures that the most remote, rural, or previously under-served enterprise location has access to the same productivity solutions as are available at the company's headquarters in the most well-connected metropolitan centres

Let's start the conversation.
