

Attention News/Assignment Editors:
Media advisory – WireIE Holdings International Inc. Releases Smart Grid White Paper

Richmond Hill, ON, March 18 – WireIE Holdings International Inc.’s Chief Technology Officer (CTO), Tim Brown, has just completed a white paper entitled, “Smart Grid: A Practical View”.

<http://www.wireie.com/blog/?p=23>

This white paper is the first of its kind to introduce the technological specifics of Smart Grid, as well as how to go about executing them.

Abstract:

Smart Grid will facilitate energy conservation across the entire electrical energy supply chain (broadly known as generation, transmission, distribution & consumption). Up to this point, however, little has been written as to how this will actually be achieved. The intent of this paper is to discuss in practical terms where the opportunities for conservation are in the supply chain. From there a Smart Grid network architecture to address energy conservation (among other operational benefits) is described. Finally, wireless technologies and Operation Support Systems essential in realizing Smart Grid’s full potential are discussed.
