

WireIE introduces eWire Broadband Wireless Services Division

Nov. 28 (Richmond Hill ON) – WireIE is pleased to announce their new wireless broadband services division, eWire Broadband, targeted at the wholesale Tier 1 and Tier 2 carrier market. eWire Broadband designs, builds, and operates secure, high availability broadband wireless access infrastructure to underserved areas of Canada.

eWire caters to the significant and growing demand for reliable, high-speed Ethernet-based services for the health care sector, utility and a number of commercial sectors that are ideally suited to wireless-based access solutions using both licensed and unlicensed microwave radio spectrum.

“I am extremely proud to offer eWire’s outstanding white label managed wholesale solutions to meet the growing demand of high speed Internet, and extend its market reach”, said Robert Barlow, President & CEO of WireIE Holdings International Inc.

Alternative high-speed solutions using broadband wireless technologies represent a significant and growing demand for many areas in Canada.

Broadband access links are the “on-ramps” to the Internet and also provide secure, high availability Ethernet connectivity to public sector and business-wide area networks. They are recognized as critical to economic development, public health and safety, and for businesses to remain competitive in the global economy.

eWire’s engineered wireless access solutions are targeted to areas where only low-speed, “legacy” copper-based data services are typically available. eWire’s solutions are sure to bring previously underserved regions of Canada to the same technology level as the larger cities.
